

4139 PC/104 RS-422 FPGA CARD

- 8 Full duplex RS-422 channels
- 10 Mbit/S RS-422 data rate
- RS-422 has galvanic isolation
- 200K gate FPGA
- 24 TTL I/O GPIO BITS
- 10KV ESD protected RS-422
- Optional RS-422 termination
- Made in USA - local support
- 2 year warranty

The MESA 4139 is a communication oriented programmable I/O card for the PC/104 bus. The 4139 has 8 full duplex RS-422 /485 interfaces that are isolated from PC/104 ground and 24 general purpose TTL I/O pins.

The 4139 uses a 200K gate Spartan2 FPGA. The FPGA is downloadable from the PC/104 bus side, allowing creation of almost any kind of specialized I/O function.

Several pre-made functions are provided, including a simple loopback function, 8 channel UART, SSI absolute encoder interface and others. VHDL source is provided for all examples.

The differential interfaces can be used in full duplex (RS-422) or half duplex (RS-485) modes. Differential I/O is galvanically isolated from system ground.

All TTL I/O bits are 5V tolerant and can sink 24 mA. Pullup resistors are provided for all pins so that they may be connected directly to opto-isolators, contacts etc.

4139 TTL I/O uses a 50 pin connector with I/O module rack compatible pinouts and interleaved grounds, compatible with Mesa's 'Anything I/O' daughter cards.

ORDERING INFORMATION:

- 4139 RS-422 FPGA CARD - COMMERCIAL TEMP RANGE
- 4139-I RS-422 FPGA CARD - INDUSTRIAL TEMP RANGE
